

Nursing Process and Critical Thinking

PN 102 • Chapter 5 • Foundations of Nursing, 9th ed. • pp. 81–96

Chapter 5: four ideas to connect

Assessment

Gather subjective and objective data, recognize cues, and promptly report urgent findings.

Problems and planning

Use collected data to identify needs, understand priorities, and support measurable goals.

Implementation and evaluation

Provide assigned care safely, observe the response, and determine whether the plan is working.

Clinical judgment

Connect cues, risks, priorities, and scope to choose the safest next action.

Put the chapter into safe practical nursing care

Every action begins with a cue and ends with reassessment.

Collect reliable information, decide what is most urgent, carry out authorized care, and compare the result with the expected outcome. Escalate when the patient worsens or the plan is not working.

- ✓ Collect and validate cues
- ✓ Identify the priority
- ✓ Plan within scope
- ✓ Provide and document care
- ✓ Reassess the response

RECOGNIZE → ACT → REPORT

Gather the cue.
Choose the priority.
Reassess the result.

Before moving on, explain the cue, your immediate action within scope, and the facts you would report.
