Twelve-Week Syllabus Template

Course Number: PN 106 / 267PXIRYUC2

Course Title: **Introductory Clinical Pharmacology, 12th Edition**

Semester Credits/Credit Hours: 90 hours

Lecture Hours: 60 hours

Clinical Practicum Hours: 30 hours

Faculty name(s):
- Stacy Milan

Faculty contact information

Stacy Milan
- Phone number: (954) 558-5174
- Email: sabahadur84@gmail.com

Prerequisites/Corequisites:
- PN 105: Fundamentals of Nursing

Course Description:
This course provides the learner with an introduction to basic pharmacology. Pharmacologic agents, including prescribed drugs, over-the-counter drugs, and complementary and alternative herbs and products, are presented within the major drug classifications along with general drug actions, common adverse reactions, contraindications, precautions, and interactions. The nursing process is used as a framework for presenting care of the patient as it relates to the drug and the drug regimen. Emphasis is placed on ways to promote an optimal response to therapy, how to monitor and manage adverse reactions, and important points to consider when educating patients about the use of these drugs.

Learning Outcomes: On completion of this course, learners will be able to

- Discuss the basic concepts of pharmacology.
- Describe the basic methods used in the administration of drugs.
- Compare and contrast common drug classifications.
- Identify common drugs within each drug classification.

- Explain the uses, contraindications, precautions, interactions, and general adverse reactions of the common drugs within each drug classification.
- Examine nursing actions that promote an optimal response to pharmacologic therapy, how to manage adverse reactions, and important points to consider when educating patients about the use of these drugs.
- Diagram the pharmacologic regimen in a patient-specific mind map.

Topical Outline:

- Nursing foundation of clinical pharmacology
- Drugs used to fight infections
- Drugs used to manage pain
- Drugs that affect the central nervous system
- Drugs that affect the peripheral nervous system
- Drugs that affect the neuromuscular system
- Drugs that affect the respiratory system
- Drugs that affect the cardiovascular system
- Drugs that affect the gastrointestinal system
- Drugs that affect the endocrine system
- Drugs that affect the urinary system
- Drugs that affect the immune system
- Drugs that fight cancer
- Drugs that affect other body systems

Course Policies

Attendance Policy:

The school's attendance policy approximates the expectations found in a work situation. It is essential that each student learns the discipline of regular and prompt attendance as well as the skills involved in the workplace. At the time the student moves from education and training into a career, employers will be interested in dependability and punctuality. No matter how skilled the person, an employee is valuable only when present on the job.

Though regular and punctual attendance of scheduled classes is expected, the school understands that emergencies and unforeseeable life situations occur that may lead the student to miss class. Students must maintain a minimum of 80% attendance in class. If a student misses a class, the hours recorded for the absence will be the number of hours listed on the schedule. If a student is not on an approved leave of absence and is absent more than five (5) consecutive school days, the student will be dismissed.

After an extended illness of more than three (3) days, a student is required to present written clearance from a physician to return to school. If, for any reason, a student is not able to attend a scheduled class, the student must call the school at least two (2) hours prior to the scheduled class. A record of attendance is kept for each student as a part of the student's permanent records. Student records are available to students upon request.

ABSENCE POLICY

Excused absences may be granted for any of the following reasons:

- Death in the immediate family (parent, spouse, child, sibling, in-law)
- Student's illness documented by a physician.
- Illness or injury of an immediate family member (parent, spouse, child, sibling, in-law) documented by a physician.
- Military duty with documentation.

TARDINESS

Students must come to class on time. Late arrivals may be excused at the discretion of the instructor. Tardiness is defined as arriving more than five (5) minutes after the start of a regularly scheduled class. Once a student has three (3) unexcused late arrivals, the student must be formally counseled. A counseling session will determine what actions should be taken by the student to reduce tardiness. Three (3) or more unexcused late arrivals will be marked as absent.

ATTENDANCE PROBATION

Students must maintain a minimum of 80% attendance in class. If a student's overall attendance drops below 80%, the student is advised by the President and will be placed on probation for one evaluation period. At the end of an evaluation period the student will be re- evaluated. If the following conditions are met, the probationary status will be lifted.

- Students are required to have an overall attendance rate of 80%.
- Students must achieve a grade of "C" or higher.

- Students must have a satisfactory progress report from the instructor.
- Failure to achieve satisfactory progress after the probationary period will result in dismissal from the school unless a special condition is made and documented by the President.

Student Evaluation/Grading Policies:
GRADING SYSTEM
Grades are based on class work, written examinations, and evaluation of skills. If you have difficulty maintaining progress, you will receive individual counseling. The grading scale is as follows:

Grades	Percentage	GPA
A	90 - 100%	4.0
B	80 - 89%	3.0 – 3.99
C	70 - 79%	2.0 – 2.99
D	60 - 69%	1.0 – 1.99
F	0 - 59%	0.0 – 0.99

SATISFACTORY ACADEMIC PROGRESS
All students must maintain satisfactory academic progress to remain enrolled at the institute. Satisfactory academic progress is determined by measuring the student's cumulative grade point average (CGPA) and the student's rate of progress toward completion of the academic program. These are outlined below.

To remain in good standing, the student must maintain at least a cumulative grade point average of 3.0 or a B. Written numeric grade reports for each subject will be provided to students by the second school day after the completion of the course or module. A student achieving a cumulative grade point average below 3.0 at the time of evaluation will be advised of their unsatisfactory academic progress and placed on academic probation.

The institution monitors students' academic progress in their program of study. Students who are not meeting the minimum satisfactory academic progress (SAP) standards will be subject to sanctions. Evaluation periods for measurement of Satisfactory Academic Progress are Standards.

Broward-Miami Health Institute is a non-degree Diploma granting institution. Satisfactory progress is based on clock hours completed and is checked three times during the program. The first check will be made at 25% of the program at which time the student must have a minimum of a 3.0 GPA. The second check is done at 50% of the program and the student must have a minimum grade point average of 3.0 GPA. The third check is done upon completion, where the student must achieve a minimum of a 3.0 GPA.

At each evaluation satisfactory progress is checked. If the student is not maintaining the grade point average as previously specified, the student will be put on a thirty-day probationary period, at the end of which time the student should

have raised his/her average to minimum standard. If, however, the student was unable to raise his/her GPA after the probationary period, he/she will receive a failing grade at that point. However, student may be allowed to repeat the failed course at a later cycle or be dismissed from the program.

At each assessment point satisfactory academic progress, students will be required to have successfully
completed (passed) a minimum of 67% of the total number of credits attempted up to that point in time.

Evaluation Periods for Satisfactory Academic Progress (SAP):

- Practical Nursing Students are evaluated at: **337** hours and **675** hours and **1350** hours

SAP - Evaluation and Timeframe to Complete Policy
Students are required to complete their program within a reasonable time frame. The maximum timeframe is 150% of the published length of the program study.

Program	Clock Hours	Maximum Allowed Time Frame
Practical Nursing	1350	2025
Medical Assistant	1300	1950
Medical Billing and Coding	1110	1665
Patient Care Technician	600	900
Home Health Aide	75	112.5

Examination Policy:
All exams are administered securely online, following the timeline set by instructors.

Expectations of Students:
STUDENT/STUDENT INTERACTION
It is expected that students will consistently display a professional and positive attitude in interactions with
fellow students.

- Students will complete all assignments alone, without the aid of another student.
- Students will perform cooperatively when working in assigned areas with other students.
- Students will display respect for fellow students regardless of ethnicity, socioeconomic background,religion, sex, or sexual orientation.

STUDENT/INSTRUCTOR INTERACTION
It is expected that students will consistently display a professional and positive attitude when interacting with
instructors.

- Students will work to the best of their ability to complete all assignments.
- Students will use established procedures in mediating any differences between yourself and the instructor.

- Students will always demonstrate respect for the instructor regardless of ethnicity, socioeconomic background, religion, sex, or sexual orientation.
- Students will always demonstrate appropriate behavior and adapt to instructional input.

Assignments/Presentations:
Assignments and quizzes are submitted and graded through the platform, with automatic grading for quizzes and personalized feedback for written assignments.

Disability Accommodation Statement:
The school is nonsectarian and does not discriminate with regard to race, creed, color, national origin, age, sex, disability, or marital status in any of its academic program activities, employment practices, or admissions policies.

Academic Honesty Policy:
At Broward-Miami Health Institute appropriate students conduct in each class and when communicating with others in the Institute it is very important. Any inappropriate conduct could result in dismissal from the Institute.
The following types of conduct are unacceptable:

1. All forms of academic misconduct include but are not limited to cheating, fabrication, plagiarism, or facilitating academic dishonesty.
2. Plagiarism: All work submitted by a student must represent the student's original endeavor. When outside sources are used as references, the student should identify the source to make clear the extent to which the source has been used. The Institute considers plagiarism and falsification of documents a serious matter that will result in appropriate sanctions including loss of full or partial credit for the work, suspension for a specific period, or expulsion from the program.
3. Other forms of dishonesty include but are not limited to fabricating information, furnishing false information, or reporting a false emergency to the Institute.
4. Forgery, alteration, or misuse of any Institute document, record, key, electronic device, or identification.
5. Unauthorized entry to, possession of, receipt of, or use of any Institute services; equipment; resources; or properties, including the Institute's name, insignia, or seal.
6. Sexual harassment, as defined here: Sexual harassment is unwelcomed sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature, when submission to or rejection of this conduct explicitly or implicitly affects a person's education, unreasonably interferes with a person's educational performance, or creates an intimidating, hostile or offensive learning environment. In the interest of preventing sexual harassment, the Institute will respond to reports of any such conduct.

Course Schedule:
Complete each learning module before progressing on to the next module. Evaluate and reflect on your learning before progressing on to the next module.

WEEK 1

Before reading assignments, take the prequiz for each chapter to assess your level of knowledge and use the results to focus your learning activities.

<table>
<tr><td>Learner Outcomes for this Module:</td><td colspan="2">At the end of this module, the student will be able to:
Pharmacology Principles & Drug Actions (Chapter 1)
● Define key pharmacology terms, drug naming conventions, legal classifications (prescription, nonprescription, controlled substances), and herbal remedies.
● Explain drug development in the U.S., mechanisms of drug action, drug interactions, and modifying factors such as tolerance, cumulative effects, and idiosyncratic responses.
● Evaluate the clinical nursing implications associated with drug actions, side effects, and adverse reactions.
Safe Drug Administration Protocols & Routes (Chapter 2)
● Apply the "5 + 1 Rights" of drug administration, evaluate medication orders, and utilize safety strategies to prevent errors across different dispensing systems.
● Execute administration protocols across enteral, parenteral, topical, and mucous membrane routes.
● Fulfill nursing responsibilities before, during, and after administering medications.
Dosage Calculations & Dosing Safety (Chapter 3)
● Implement systematic safety frameworks and accurately interpret drug labels to extract dosage calculation data.
● Maintain precision with numerical unit labeling and execute accurate mathematical calculations to compute correct drug dosages.
Application of the Nursing Process (Chapter 4)
● Apply the five phases of the nursing process (Assessment, Analysis/Diagnosis, Planning, Implementation, Evaluation) to drug therapy.
● Differentiate objective from subjective patient data to formulate common drug-related nursing diagnoses and corresponding nursing interventions.
Client and Family Teaching (Chapter 5)
● Guide clients through the steps of medication education, leveraging effective principles of the teaching and learning process.
● Build therapeutic nurse–client relationships using the core components of health communication within the nursing process.
● Formulate practical strategies and adaptations for clients to safely manage medication administration in the home setting.</td></tr>
<tr><td>Week</td><td>Topic(s)</td><td>Reading Assignments</td></tr>

</table>

		Principles of Pharmacology • Chapter 2 Administration of Drugs • Chapter 3 Making Drug-Dosing Safer • Chapter 4 The Nursing Process • Chapter 5 Client and Family Teaching

- After completing the reading for this module, complete the PrepU ML Quizzes for the respective chapters.
- If you have scored 80% or higher on each chapter quiz, you are ready to move on to the next module.
- If you have not scored 80% or higher on each chapter quiz, then you will need to complete the following remediation activities.
    - Review the assigned module readings and submit a video recording demonstrating your understanding of the topics missed.
- Before moving onto the next module, complete the following reflection:
    - Case Studies after each chapter

WEEK 2

Before reading assignments, take the prequiz for each chapter to assess your level of knowledge and use the results to focus your learning activities.

Learner Outcomes for this Module:	At the end of this module, the student will be able to: Sulfonamides (Chapter 6) • Describe bacterial sensitivity and objective signs of severe skin reactions like Stevens–Johnson syndrome. • Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions for sulfonamides. • Identify nursing assessments, diagnoses, response promotion, fluid intake rationale, and client education. Cell Wall Disrupting Antibacterials (Chapter 7) • Explain drug actions, uses, adverse reactions, contraindications, precautions, interactions, and hypersensitivity reactions. • Identify preadministration and ongoing assessments, nursing diagnoses, actions to minimize adverse effects, and client education points.

	● Protein Synthesis Inhibiting Antibacterials (Chapter 8) ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, and client education strategies. DNA/RNA Synthesis Inhibiting Antibacterials (Chapter 9) ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, nursing diagnoses, response promotion, and client education guidelines. Antitubercular Drugs (Chapter 10) ● Discuss mycobacterial TB treatment, directly observed therapy (DOT), drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, nursing diagnoses, response promotion, and client education. Antiviral Drugs (Chapter 11) ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions for antiviral and antiretroviral drugs. ● Identify preadministration and ongoing assessments, nursing diagnoses, client goals, response promotion, and family education. Antifungal & Antiparasitic Drugs (Chapter 12) ● Differentiate superficial/systemic fungal infections and compare helminthic, protozoal, and amebiasis infections. ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, nursing diagnoses, client goals, response promotion, and family education.	
Week	**Topic(s)**	**Reading Assignments**
2	Drugs Used to Fight Infections	● Chapter 6 Antibacterial Drugs: Sulfonamides ● Chapter 7 Antibacterial Drugs That Disrupt the Bacterial Cell Wall ● Chapter 8 Antibacterial Drugs That Interfere With Protein Synthesis ● Chapter 9 Antibacterial Drugs That Interfere With

		DNA/RNA Synthesis ● Chapter 10 Antitubercular Drugs ● Chapter 11 Antiviral Drugs ● Chapter 12 Antifungal and Antiparasitic Drugs

- After completing the reading for this module, complete the PrepU ML Quizzes for the respective chapters.
- If you have scored 80% or higher on each chapter quiz, you are ready to move on to the next module.
- If you have not scored 80% or higher on each chapter quiz, then you will need to complete the following remediation activities.
    - Review the assigned module readings and submit a video recording demonstrating your understanding of the topics missed.
- Before moving onto the next module, complete the following reflection:
    - Case Studies after each chapter

WEEK 3

Before reading assignments, take the prequiz for each chapter to assess your level of knowledge and use the results to focus your learning activities.

Learner Outcomes for this Module:	At the end of this module, the student will be able to: Salicylates & Nonsalicylates (Chapter 13) ● Discuss the nature and challenges of assessing a client's pain experience. ● Contrast drug actions, uses, adverse reactions, contraindications, precautions, and interactions of salicylates and acetaminophen. ● Identify nursing assessments, diagnoses, adverse reaction management, response promotion, and client education. NSAIDs & Migraine Medications (Chapter 14) ● Compare standardized pain assessment methods across diverse client populations. ● Explain drug profiles (actions, uses, adverse reactions, contraindications, precautions, interactions) for NSAIDs and migraine headache medications. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, and client education for NSAIDs. Opioid Analgesics & Antagonists (Chapter 15)

	● Explain how pain intensity dictates drug selection between opioid and nonopioid analgesics. ● Discuss drug actions, uses, adverse reactions, contraindications, precautions, and interactions of opioid analgesics and antagonists. ● Identify preadministration and ongoing assessments, nursing diagnoses, optimal response strategies, and client education. Anesthetic Drugs (Chapter 16) ● Describe local, regional, preanesthetic, conscious sedation, and general anesthesia drugs and their methods of administration. ● Outline the four stages of general anesthesia and the purpose of preanesthetic medications. ● Identify nursing responsibilities during preanesthetic administration and postanesthesia care unit (PACU) recovery.	
Week	**Topic(s)**	**Reading Assignments**
3	Drugs Used to Manage Pain	● Chapter 13 Nonopioid Analgesics: Salicylates and Nonsalicylates ● Chapter 14 Nonopioid Analgesics: Nonsteroidal Anti-Inflammatory Drugs (NSAIDs) and Migraine Headache Medications ● Chapter 15 Opioid Analgesics & Antagonists ● Chapter 16 Anesthetic Drugs

- After completing the reading for this module, complete the PrepU ML Quizzes for the respective chapters.
- If you have scored 80% or higher on each chapter quiz, you are ready to move on to the next module.
- If you have not scored 80% or higher on each chapter quiz, then you will need to complete the following remediation activities.
    - Review the assigned module readings and submit a video recording demonstrating your understanding of the topics missed.
- Before moving onto the next module, complete the following reflection:
    - Case Studies after each chapter

WEEK 4

Before reading assignments, take the prequiz for each chapter to assess your level of knowledge and use the results to focus your learning activities.

Learner Outcomes for this Module:	At the end of this module, the student will be able to: CNS Stimulants (Chapter 17) ● List the three classes of CNS stimulants. ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and client education. Antidementia Drugs (Chapter 18) ● Compare and contrast clinical manifestations of Alzheimer's disease (AD). ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions for antidementia drugs. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and client education. Antianxiety Drugs (Chapter 19) ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions associated with antianxiety drugs. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and client education. Sedatives & Hypnotics (Chapter 20) ● Differentiate between a sedative and a hypnotic. ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and client education. Antidepressant Drugs (Chapter 21) ● Define depression, identify major depressive disorder (MDD) symptoms, and compare different types of antidepressant drugs. ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and client education. Antipsychotic Drugs (Chapter 22)

	● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions associated with antipsychotic drugs. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and client education. (Note: Chapter 22 was repeated twice in the text). Adrenergic Drugs (Chapter 23) ● Discuss sympathetic autonomic nervous system activity, types of shock, physiologic shock responses, and adrenergic drug use in shock treatment. ● Explain drug actions, uses, contraindications, precautions, interactions, and adverse reactions of adrenergic vasopressor drugs. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education. Adrenergic-Blocking Drugs (Chapter 24) ● List the four types of adrenergic-blocking drugs. ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, nursing diagnoses, orthostatic hypotension minimization actions, adverse reaction management, response promotion, and patient education. Cholinergic Drugs (Chapter 25) ● Discuss parasympathetic nervous system activity. ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of cholinergic drugs. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education. ● Cholinergic-Blocking Drugs (Chapter 26) ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of cholinergic-blocking (anticholinergic) drugs. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education.	
Week	**Topic(s)**	**Reading Assignments**
4	Drugs That Affect the Central Nervous System Drugs That Affect the Peripheral Nervous System	● Chapter 17 Central Nervous System Stimulants ● Chapter 18 Antidementia Drugs ● Chapter 19 Antianxiety Drugs

		• Chapter 20 Sedatives and Hypnotics • Chapter 21 Antidepressant Drugs • Chapter 22 Antipsychotic Drugs • Chapter 23 Adrenergic Drugs • Chapter 24 Adrenergic-Blocking Drugs • Chapter 25 Cholinergic Drugs • Chapter 26 Cholinergic-Blocking Drugs

- After completing the reading for this module, complete the PrepU ML Quizzes for the respective chapters.
- If you have scored 80% or higher on each chapter quiz, you are ready to move on to the next module.
- If you have not scored 80% or higher on each chapter quiz, then you will need to complete the following remediation activities.
    - Review the assigned module readings and submit a video recording demonstrating your understanding of the topics missed.
- Before moving onto the next module, complete the following reflection:
    - Case Studies after each chapter

WEEK 5

Before reading assignments, take the prequiz for each chapter to assess your level of knowledge and use the results to focus your learning activities.

Learner Outcomes for this Module:	At the end of this module, the student will be able to: Antiparkinson Drugs (Chapter 27) • Define Parkinson's disease and parkinsonism. • Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions. • Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education. Antiepileptics (Chapter 28) • List the different types of antiepileptic drugs. • Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions.

	● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education. Skeletal Muscle, Bone, and Joint Disorder Drugs (Chapter 29) ● List the types of drugs used to treat musculoskeletal disorders. ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education.	
Week	**Topic(s)**	**Reading Assignments**
5	Drugs That Affect the Neuromuscular System	● Chapter 27 Antiparkinson Drugs ● Chapter 28 Antiepileptics ● Chapter 29 Skeletal Muscle, Bone, and Joint Disorder Drugs

- After completing the reading for this module, complete the PrepU ML Quizzes for the respective chapters.
- If you have scored 80% or higher on each chapter quiz, you are ready to move on to the next module.
- If you have not scored 80% or higher on each chapter quiz, then you will need to complete the following remediation activities.
    - Review the assigned module readings and submit a video recording demonstrating your understanding of the topics missed.
- Before moving onto the next module, complete the following reflection:
    - Case Studies after each chapter

WEEK 6

Before reading assignments, take the prequiz for each chapter to assess your level of knowledge and use the results to focus your learning activities.

Learner Outcomes for this Module:	At the end of this module, the student will be able to: ● List the types of drugs used to treat upper respiratory conditions ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of upper respiratory drugs. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education.

	● List the types of drugs used to treat lower respiratory conditions (e.g., bronchodilators, inhaled corticosteroids, antiasthmatic drugs). ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of lower respiratory drugs.	
Week	**Topic(s)**	**Reading Assignments**
6	Drugs That Affect the Respiratory System	● Chapter 30 Upper Respiratory System Drugs ● Chapter 31 Lower Respiratory System Drugs

- After completing the reading for this module, complete the PrepU ML Quizzes for the respective chapters.
- If you have scored 80% or higher on each chapter quiz, you are ready to move on to the next module.
- If you have not scored 80% or higher on each chapter quiz, then you will need to complete the following remediation activities.
    - Review the assigned module readings and submit a video recording demonstrating your understanding of the topics missed.
- Before moving onto the next module, complete the following reflection:
    - Case Studies after each chapter

WEEK 7

Note to the Learner: Before reading assignments, take the prequiz for each chapter to assess your level of knowledge and use the results to focus your learning activities.

Learner Outcomes for this Module:	At the end of this module, the student will be able to: Diuretics (Chapter 32) ● List the classes of diuretics and explain their uses, drug actions, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, nursing diagnoses, fluid and electrolyte monitoring, adverse reaction management, response promotion, and patient education. Antihyperlipidemic Drugs (Chapter 33) ● List the types of drugs used to treat hyperlipidemia and explain their drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, lifestyle modifications, and patient education. Antihypertensive Drugs (Chapter 34)

	● List the drug classes used to treat hypertension and explain their drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, blood pressure monitoring, nursing diagnoses, orthostatic hypotension management, response promotion, and patient education. Antianginal and Vasodilating Drugs (Chapter 35) ● List the types of antianginal and vasodilating drugs and explain their drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, chest pain evaluation protocols, nursing diagnoses, adverse reaction management, response promotion, and patient education. Anticoagulant and Thrombolytic Drugs (Chapter 36) ● List the types of anticoagulant, antiplatelet, and thrombolytic drugs and explain their drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, laboratory monitoring (e.g., PT/INR, aPTT), signs of bleeding, nursing diagnoses, safety precautions, and patient education. Cardiotonic and Antiarrhythmic Drugs (Chapter 37) ● List the types of cardiotonic and antiarrhythmic drugs and explain their drug actions, uses, adverse reactions, contraindications, precautions, and interactions ● Identify preadministration and ongoing assessments (including apical pulse monitoring and ECG assessment), signs of toxicity, nursing diagnoses, response promotion, and patient education.	
Week	**Topic(s)**	**Reading Assignments**
7	Drugs That Affect the Cardiovascular System	● Chapter 32 Diuretics ● Chapter 33 Antihyperlipidemic Drugs ● Chapter 34 Antihypertensive Drugs ● Chapter 35 Antianginal and Vasodilating Drugs ● Chapter 36 Anticoagulant and Thrombolytic Drugs ● Chapter 37 Cardiotonic and

		Antiarrhythmic Drugs

- After completing the reading for this module, complete the PrepU ML Quizzes for the respective chapters.
- If you have scored 80% or higher on each chapter quiz, you are ready to move on to the next module.
- If you have not scored 80% or higher on each chapter quiz, then you will need to complete the following remediation activities.
    - Review the assigned module readings and submit a video recording demonstrating your understanding of the topics missed.
- Before moving onto the next module, complete the following reflection:
    - Case Studies after each chapter

WEEK 8

Before reading assignments, take the prequiz for each chapter to assess your level of knowledge and use the results to focus your learning activities.

Learner Outcomes for this Module:	At the end of this module, the student will be able to: Upper Gastrointestinal System Drugs (Chapter 38 ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of upper GI drugs (antacids, acid-reducing agents, and GI stimulants). ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education. Lower Gastrointestinal System Drugs (Chapter 39) ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of lower GI drugs (antidiarrheals, laxatives, and anti-inflammatory agents). ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education. Antidiabetic Drugs (Chapter 40) ● Differentiate between insulin and oral antidiabetic agents, including their drug actions, uses, adverse reactions, contraindications, precautions, and interactions. ● Identify preadministration and ongoing assessments, nursing diagnoses, hypoglycemia/hyperglycemia management, response promotion, and patient education. Pituitary and Adrenocortical Hormones (Chapter 41) ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of pituitary, adrenal cortex, and corticosteroid hormones.

	● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education. Thyroid and Antithyroid Drugs (Chapter 42) ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of thyroid replacement and antithyroid medications. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education.	
Week	**Topic(s)**	**Reading Assignments**
8	Drugs That Affect the Gastrointestinal System Drugs That Affect the Endocrine System	● Chapter 38 Upper Gastrointestinal System Drugs ● Chapter 39 Lower Gastrointestinal System Drugs ● Chapter 40 Antidiabetic Drugs ● Chapter 41 Pituitary and Adrenocortical Hormones ● Chapter 42 Thyroid and Antithyroid Drugs

- After completing the reading for this module, complete the PrepU ML Quizzes for the respective chapters.
- If you have scored 80% or higher on each chapter quiz, you are ready to move on to the next module.
- If you have not scored 80% or higher on each chapter quiz, then you will need to complete the following remediation activities.
    - Review the assigned module readings and submit a video recording demonstrating your understanding of the topics missed.
- Before moving onto the next module, complete the following reflection:
    - Case Studies after each chapter

WEEK 9

Before reading assignments, take the prequiz for each chapter to assess your level of knowledge and use the results to focus your learning activities.

Learner Outcomes for this Module:	At the end of this module, the student will be able to: Male and Female Hormones (Chapter 43)

	● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of male and female hormones. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education. Uterine Drugs (Chapter 44) ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of oxytocic and tocolytic drugs used to affect uterine function. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education during maternal-fetal care. Menopause and Andropause Drugs (Chapter 45) ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of hormone replacement therapies for menopause and andropause. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education regarding age-related hormonal therapies. Urinary Tract Anti-Infectives and Other Urinary Drugs (Chapter 46) ● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of urinary tract anti-infectives, antispasmodics, and urinary analgesics. ● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and patient education for clients receiving urinary medications.	
Week	**Topic(s)**	**Reading Assignments**
9	Drugs That Affect the Endocrine System Drugs That Affect the Urinary System	● Chapter 43 Male and Female Hormones ● Chapter 44 Uterine Drugs ● Chapter 45 Menopause and Andropause Drugs ● Chapter 46 Urinary Tract Anti-Infectives and Other Urinary Drugs

- After completing the reading for this module, complete the PrepU ML Quizzes for the respective chapters.
- If you have scored 80% or higher on each chapter quiz, you are ready to move on to the next module.

- If you have not scored 80% or higher on each chapter quiz, then you will need to complete the following remediation activities.
    - Review the assigned module readings and submit a video recording demonstrating your understanding of the topics missed.
- Before moving onto the next module, complete the following reflection:
    - Case Studies after each chapter

WEEK 10

Before reading assignments, take the prequiz for each chapter to assess your level of knowledge and use the results to focus your learning activities.

<table>
<tr><td>Learner Outcomes for this Module:</td><td colspan="2">At the end of this module, the student will be able to:
Vaccines & Immunologic Agents (Chapter 47)
● Differentiate between humoral and cell-mediated immunity and define types of immunity.
● Explain the uses of vaccines, toxoids, immune globulins, and antivenins in disease prevention.
● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, special considerations, and client education.
Immunostimulants & Modulators (Chapter 48)
● Describe cell-to-cell immune communication, interferon use in multiple sclerosis, and blood cell functions
● List agents for anemia, bleeding, and infection prevention, explaining their drug actions, uses, adverse reactions, contraindications, precautions, and interactions.
● Identify preadministration and ongoing assessments, nursing diagnoses, response promotion, and client education.
Immune Blockers (Chapter 49)
● List classes of immunosuppressive drugs and explain their drug actions, uses, adverse reactions, contraindications, precautions, and interactions.
● Identify preadministration and ongoing assessments, nursing diagnoses, adverse reaction management, response promotion, and client education.</td></tr>

WEEK 12

Before reading assignments, take the prequiz for each chapter to assess your level of knowledge and use the results to focus your learning activities.

<table>
<tr><td>Learner Outcomes for this Module:</td><td colspan="2">At the end of this module, the student will be able to:
Topical Drugs for Skin Disorders (Chapter 52)
● List the types of drugs used to treat skin disorders.
● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions.
● Identify preadministration and ongoing assessments, nursing diagnoses, optimal response promotion, and client education.
Otic and Ophthalmic Preparations (Chapter 53)
● Explain drug actions, uses, adverse reactions, contraindications, precautions, and interactions of otic and ophthalmic preparations.
● Identify preadministration and ongoing assessments, nursing diagnoses, proper administration techniques for ear and eye preparations, response promotion, and client education.
Fluids, Electrolytes, and Parenteral Therapy (Chapter 54)
● List types and uses of parenteral fluid solutions and compare electrolytes used in managing fluid and electrolyte imbalances.
● Define steps in intravenous (IV) administration, calculate IV flow rates, and identify signs and symptoms of electrolyte imbalance.
● Identify preadministration and ongoing assessments, nursing diagnoses, response promotion, and client education for IV fluids and electrolytes.</td></tr>
