

Asepsis and Infection Control

PN 102 • Chapter 7 • Foundations of Nursing, 9th ed. • pp. 117–161

Chapter 7: four ideas to connect

Chain of infection

Identify how organisms spread and where nursing actions can interrupt transmission.

Clean and sterile technique

Distinguish medical asepsis from surgical asepsis and apply the correct technique.

Precautions

Select hand hygiene, PPE, and isolation practices for the exposure risk and transmission route.

Prevention and reporting

Monitor for infection, reduce risk, and report concerning findings or exposures promptly.

Put the chapter into safe practical nursing care

Break the chain before an exposure becomes an infection.

Perform hand hygiene at the right moments, choose PPE before contact, and protect clean or sterile fields. If contamination occurs, stop, correct it, and report exposure or signs of infection promptly.

- ✓ Assess the exposure risk
- ✓ Clean hands correctly
- ✓ Choose and remove PPE safely
- ✓ Protect the field
- ✓ Report exposure or infection signs

RECOGNIZE → ACT → REPORT

Recognize the route.
Break the chain.
Report the exposure.

Before moving on, explain the cue, your immediate action within scope, and the facts you would report.
