Chapter 10: four ideas to connect

Identification and environment

Use approved identifiers and correct hazards before they cause harm.

Fall, fire, and electrical safety

Recognize common risks, follow emergency procedures, and use equipment correctly.

Restraint alternatives

Try the least restrictive measures first and follow authorization and monitoring rules.

Incident response

Meet immediate patient needs, notify the nurse, document facts, and follow reporting policy.

Put the chapter into safe practical nursing care

Prevent harm by noticing risk before the patient is injured.

Identify the patient correctly, scan the environment, and use prevention measures consistently. After an incident, care for the patient first, notify the appropriate nurse, and document facts without blame.

- ✓ Use two approved identifiers
- ✓ Correct environmental hazards
- ✓ Apply fall prevention
- ✓ Use least restrictive measures
- ✓ Respond and report after incidents

RECOGNIZE → ACT → REPORT

Spot the hazard.
Protect the patient.
Report the facts.

Before moving on, explain the cue, your immediate action within scope, and the facts you would report.
